Ver 6 Upgrade Procedure:

On the server:

1. Create on the server a temporary folder dedicated for the upgrade. We recommend to name it c:\ini
2. Copy the rp.ini file from each computer to that folder. Note: after each copy you need to rename the file. We recommend to rename it as Store+Register. I.E. If the rp.ini comes from store 03 register 01, name it 0301.ini
3. Stop the communication rpSync.
4. For each ini that you copied in step 2 above perform the "Load from text", selecting one by one all the ini files of all stations.

On Every Computer in every store:

5. Copy version 6 upgrade file (rpexe6.exe).
6. Run rpexe6.exe, start VRP and if needed execute the validation program.
7. Click on Setup (The sun icon) and click on "Central INI" check box. Click "Update". You may get a message "Problems with central INI, using local setting", in that case open "Setup" again, click on "Load from Text", verify that the item selected is your existing rp.ini, and click "Open".

On the server:

8. Verify that the tax rules in Settings, Tax table are correct.
9. Resume communication (rpSync)
10. Ensure that the fetch includes "TaxCollectedDetails" on same interval as "TaxCollected", and the send includes the TaxRules table.
