

Version 7 Upgrade procedures:

It is highly recommended to have already installed sql2005 or sql express (or higher)

All computers must be updated between communications, version 6 cannot communicate with version 7.

Download version 7 from VRP's web site to all the computers

Start at the Server:

1. Stop rpSync (fetch and send)
2. Backup the database
3. Run rpexe7.exe to extract the new program
4. Run c:\pos\rpvalid7.exe and click validate (DO NOT check or uncheck anything)
5. Change the vrp shortcut icon to refer to rp7.exe (Icon turns yellow)
6. Start VRP, click "Back Office", "Click Utilities" and click on "Security" (the second program)
7. Find the administrator, Click on "Area Functions" select ALL, Select "Allow" and click "Load"

For every computer on the same LAN perform the following:

1. Run rpexe7.exe to extract the new program
2. Change the VRP shortcut icon to refer to rp7.exe (icon turns yellow)

If you want to test version 7 before using it:

1. Make a copy of the database on the server
2. Run c:\pos\rpswitch and change the database name to the name selected in step 1 above
3. Follow hub instructions 1-6 above

To switch back, download version 6 to the test computer, run rpSwitch and change to the original name.
